COMMUNICATING DIAGNOSTIC ACCURACY

Communicating diagnostic accuracy

Question 1

- Sensitivity: 95%
- Specificity: 90%
- Pre-test probability: 2.5%
- Post-test probability ???

- 10%
- 20%
- 50%
- 80%
- 90%

Communicating diagnostic accuracy

Question 1

- Sensitivity: 95%
- Specificity: 90%
- Pre-test probability: 2.5%
- Post-test probability ???

- 10%
- 20%
- 50%
- 80%
- 90%

Communicating diagnostic accuracy

Question 1

- Sensitivity: 95%
- Specificity: 90%
- Pre-test probability: 2.5%
- Post-test probability ???

- 10%
- **20% (9% of respondents)**
- 50%
- 80%
- **90%**

Communicating diagnostic accuracy

Question 2

- LR 10

A pos test result occurs 10 times more frequently in patients with the disease compared to patients without the disease

- Pre-test probability: 2.5%

- 10%
- 20%
- 50%
- 80%
- 90%

Communicating diagnostic accuracy

Question 2

- LR 10

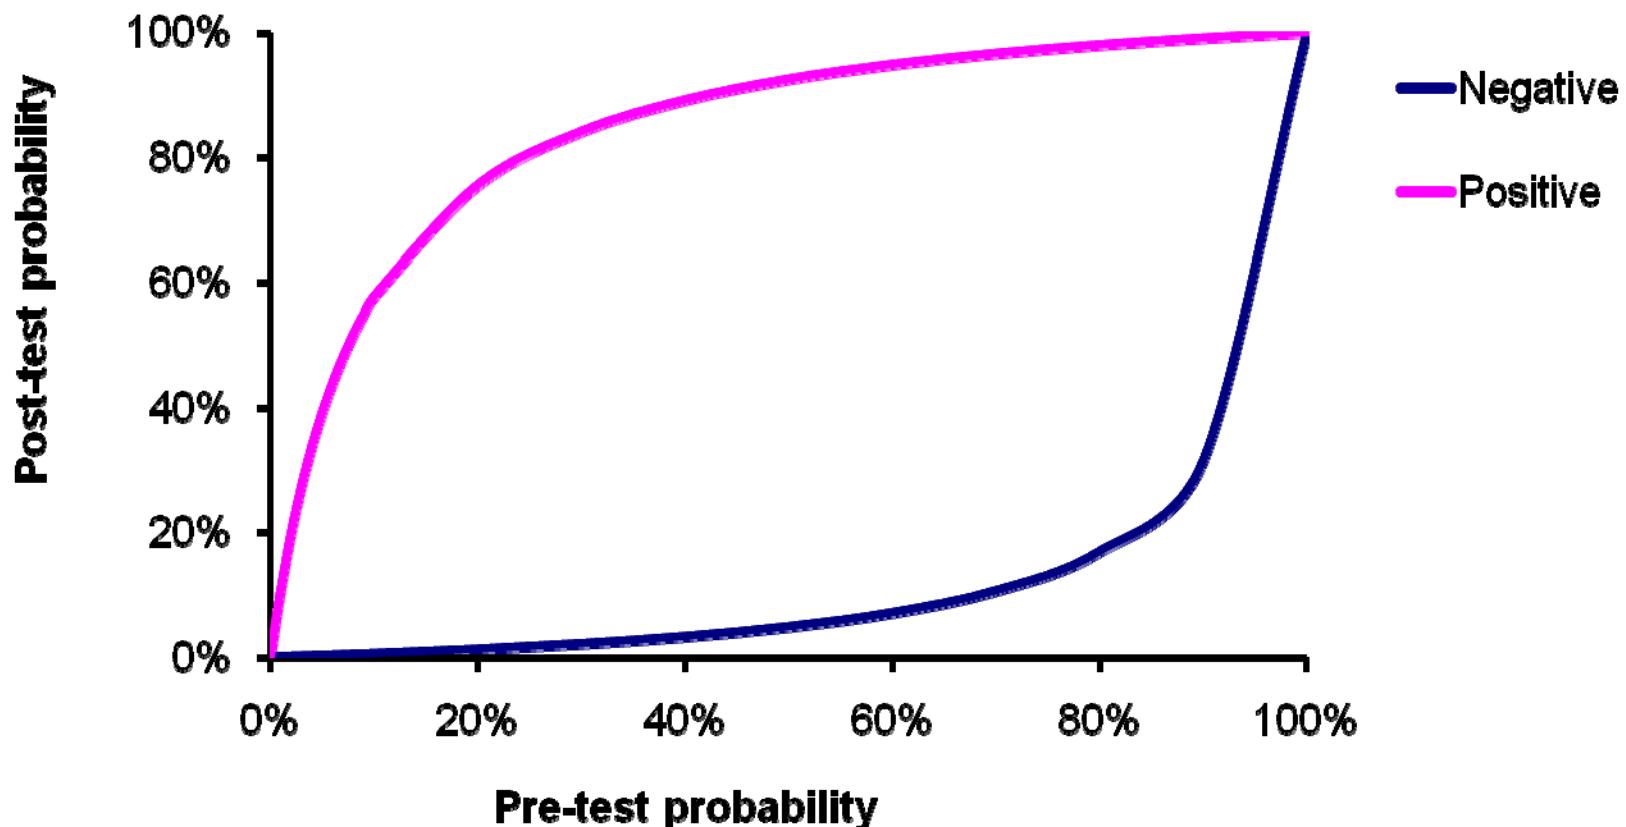

A pos test result occurs 10 times more frequently in patients with the disease compared to patients without the disease

- Pre-test probability: 2.5%

- 10%
- **20% (35% of respondents)**
- 50%
- 80%
- 90%

Communicating diagnostic accuracy

- **Question 3**

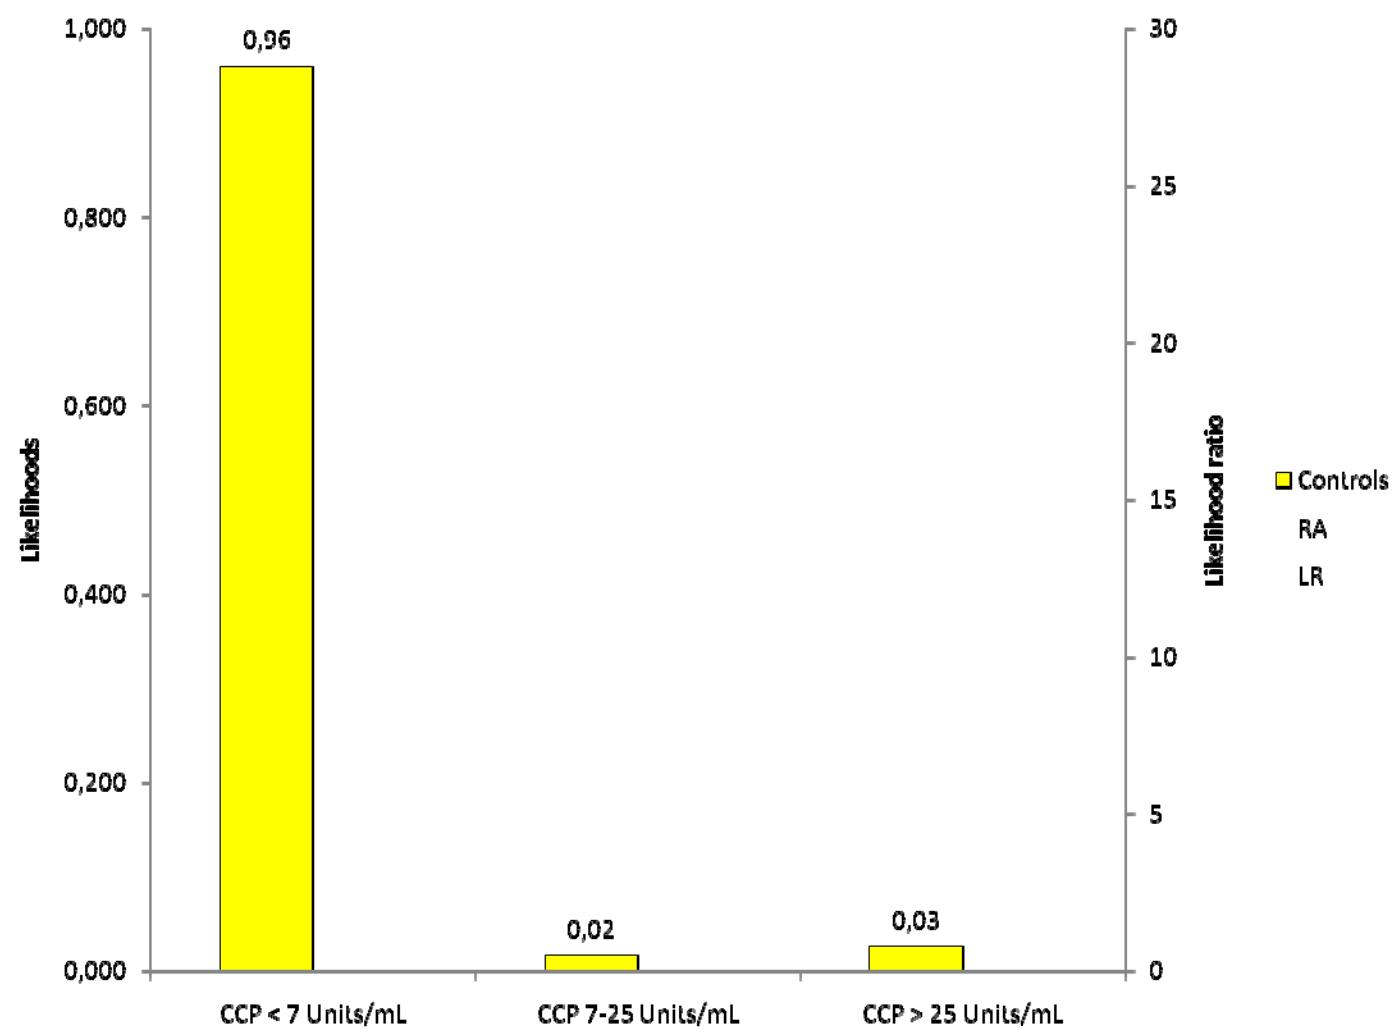

RHEUMATOID ARTHRITIS

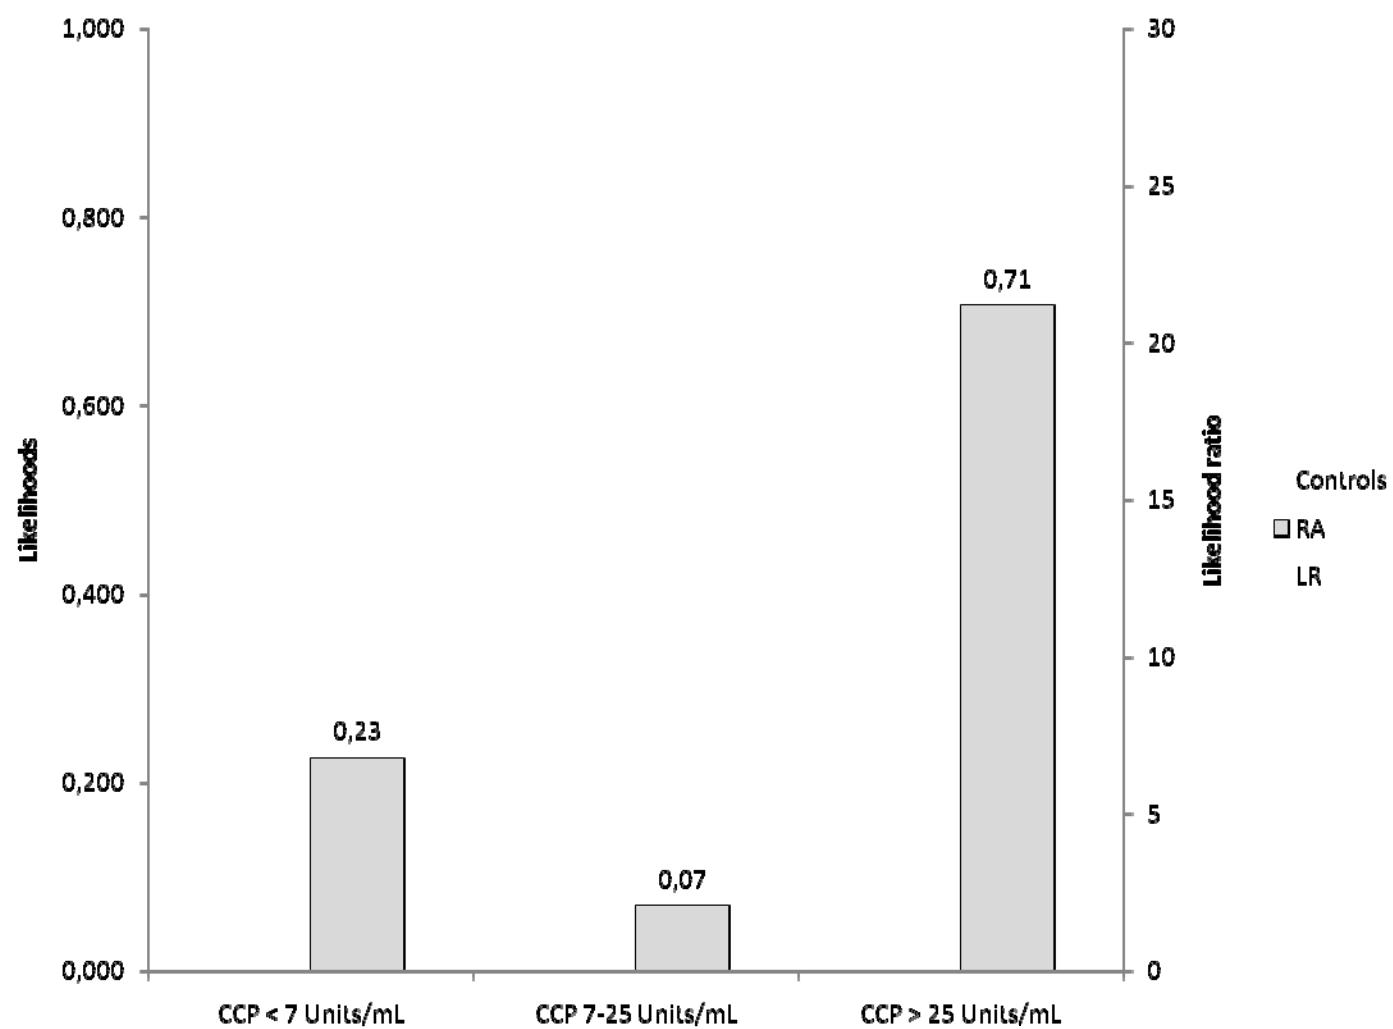

Anti-CCP

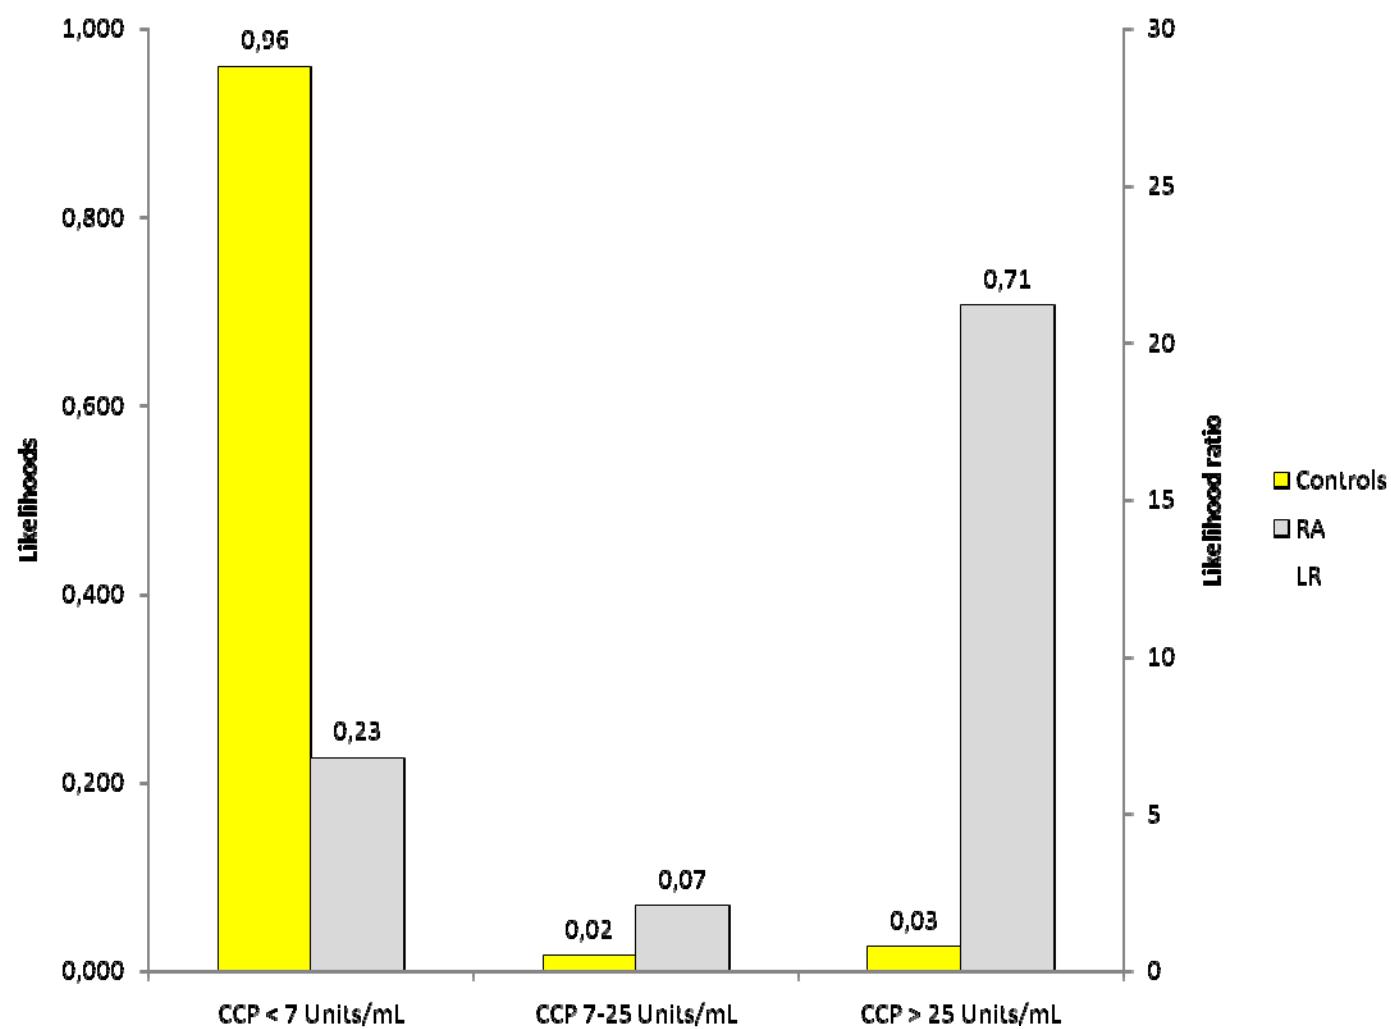

298 patients

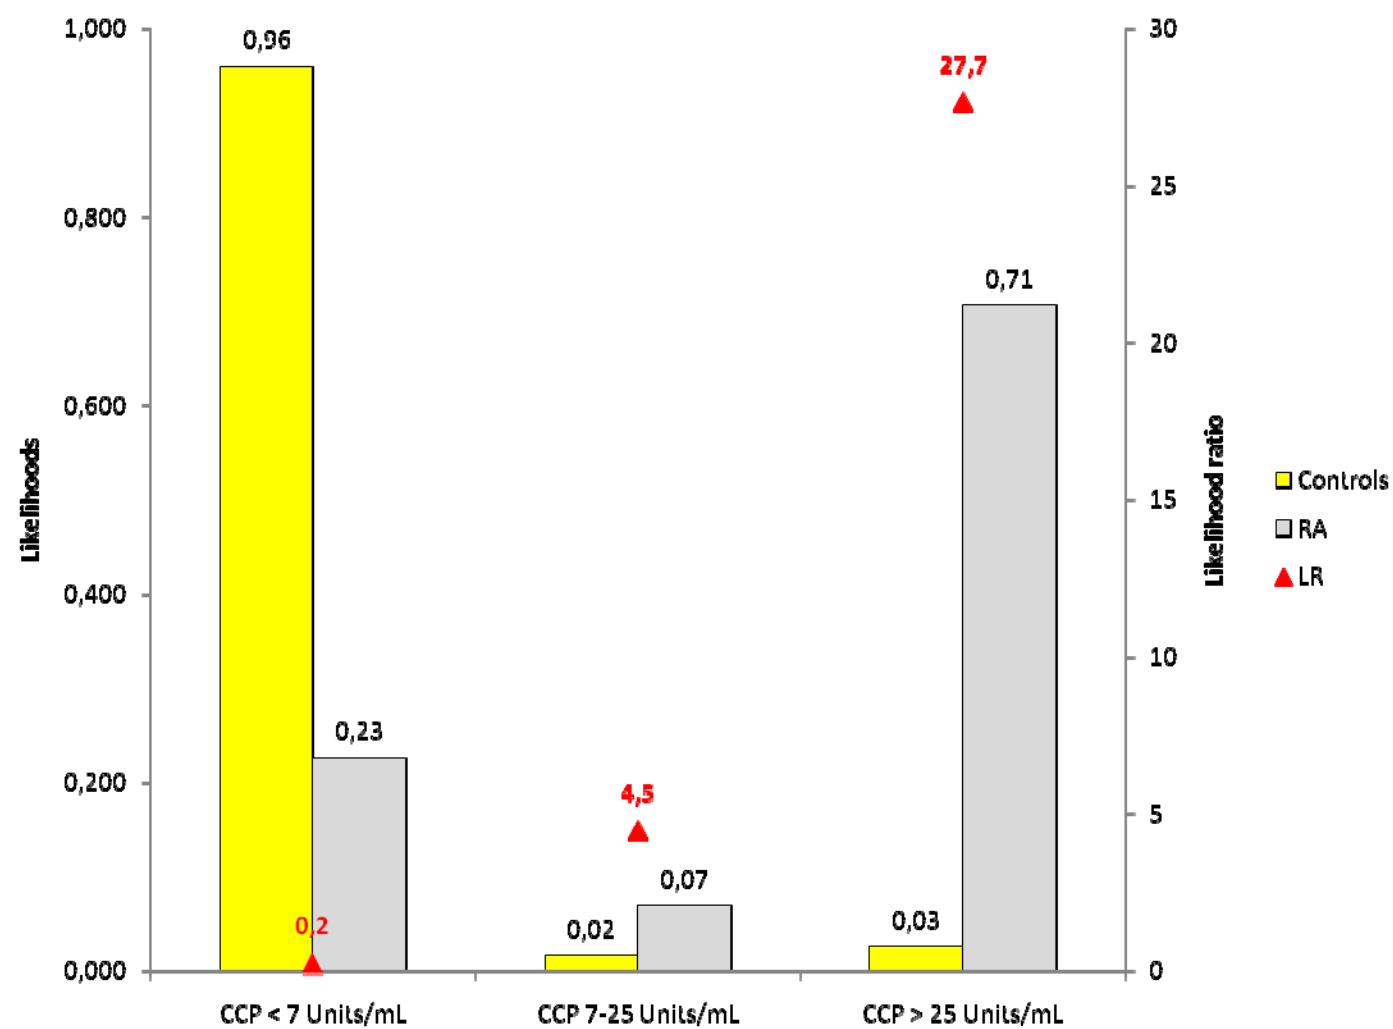

- RA patients (n=85)
 - 45 early RA
 - 40 established RA
- Diseased controls (n=165), including:
 - Psoriatic arthritis
 - Connective tissue disease
 - Organ-specific autoimmune disease
- Consecutive patients (n=48)
 - 16 RA

- Anti-CCP: Phadia (7Units/mL)
- RF: nephelometry, Immage, Beckman-Coulter (20 IU/mL)

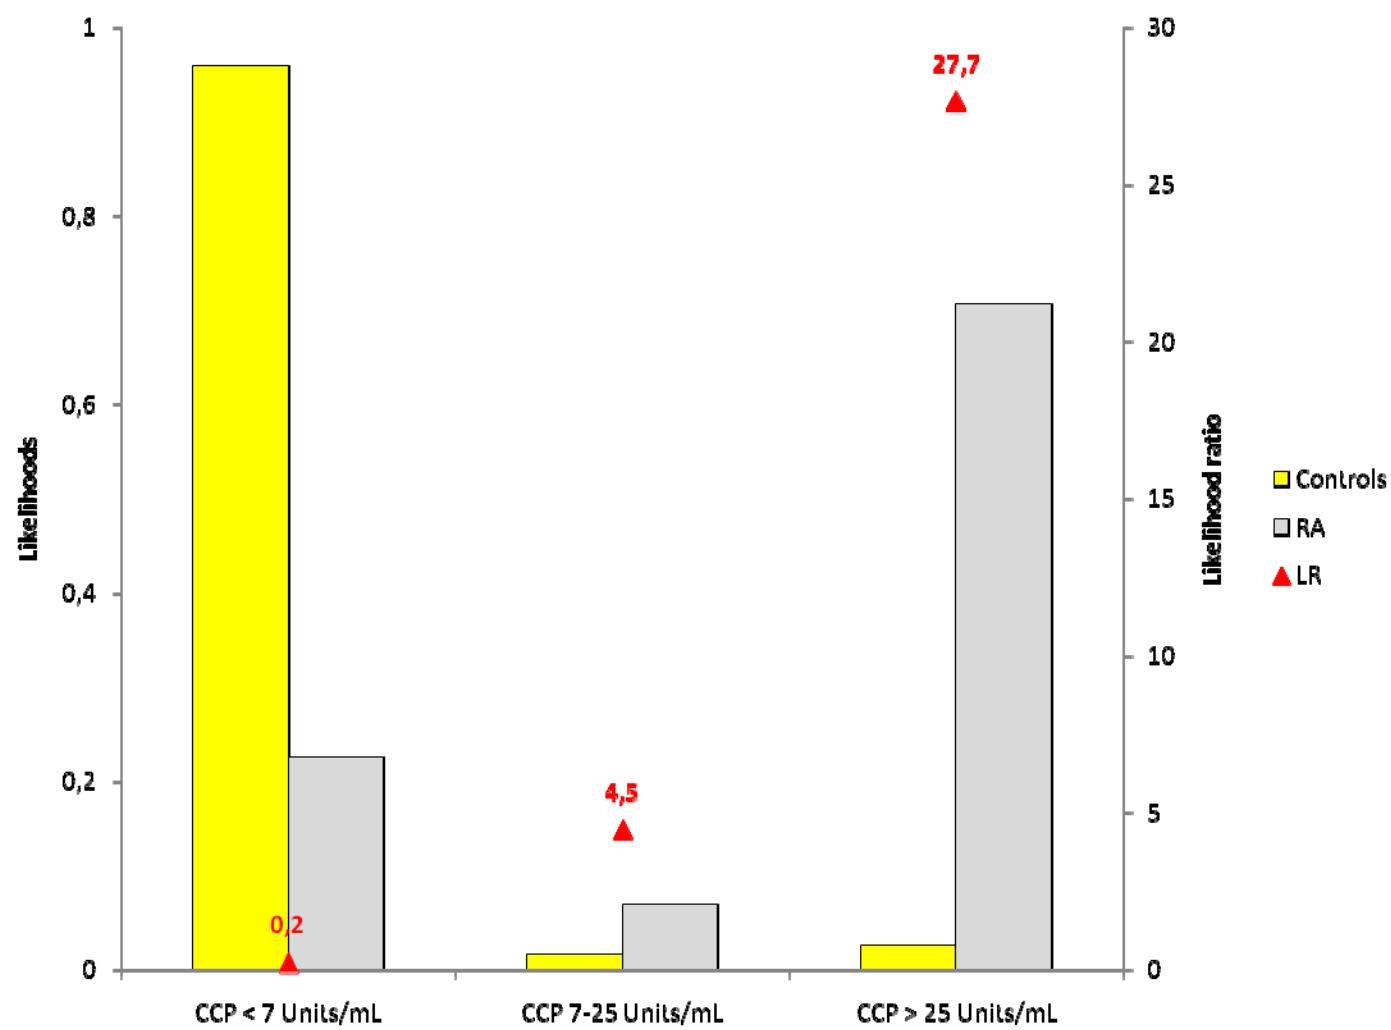

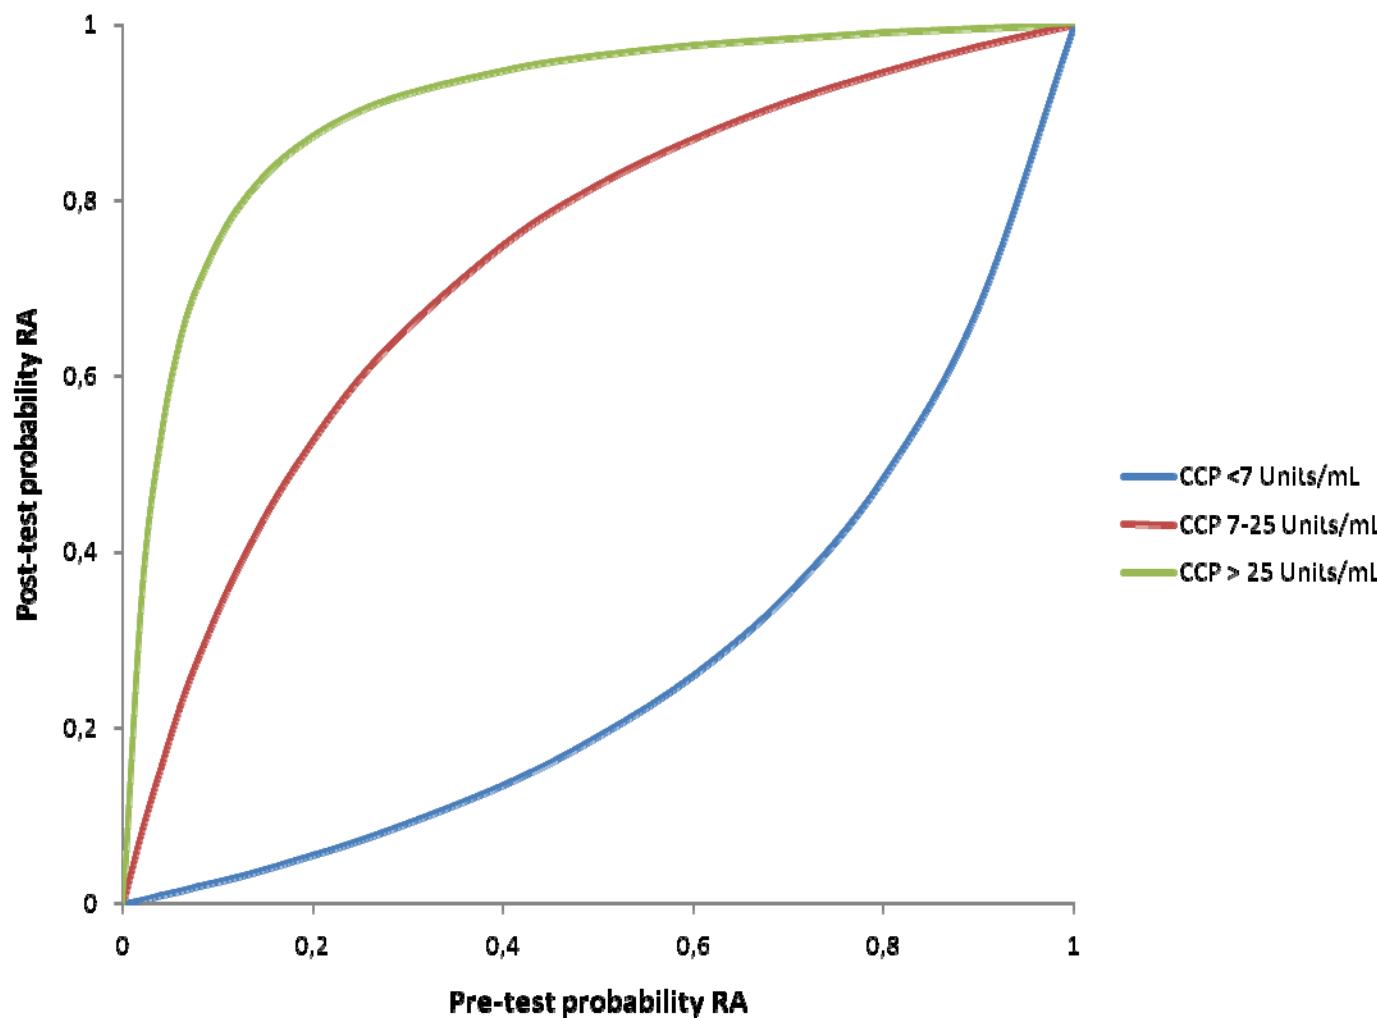

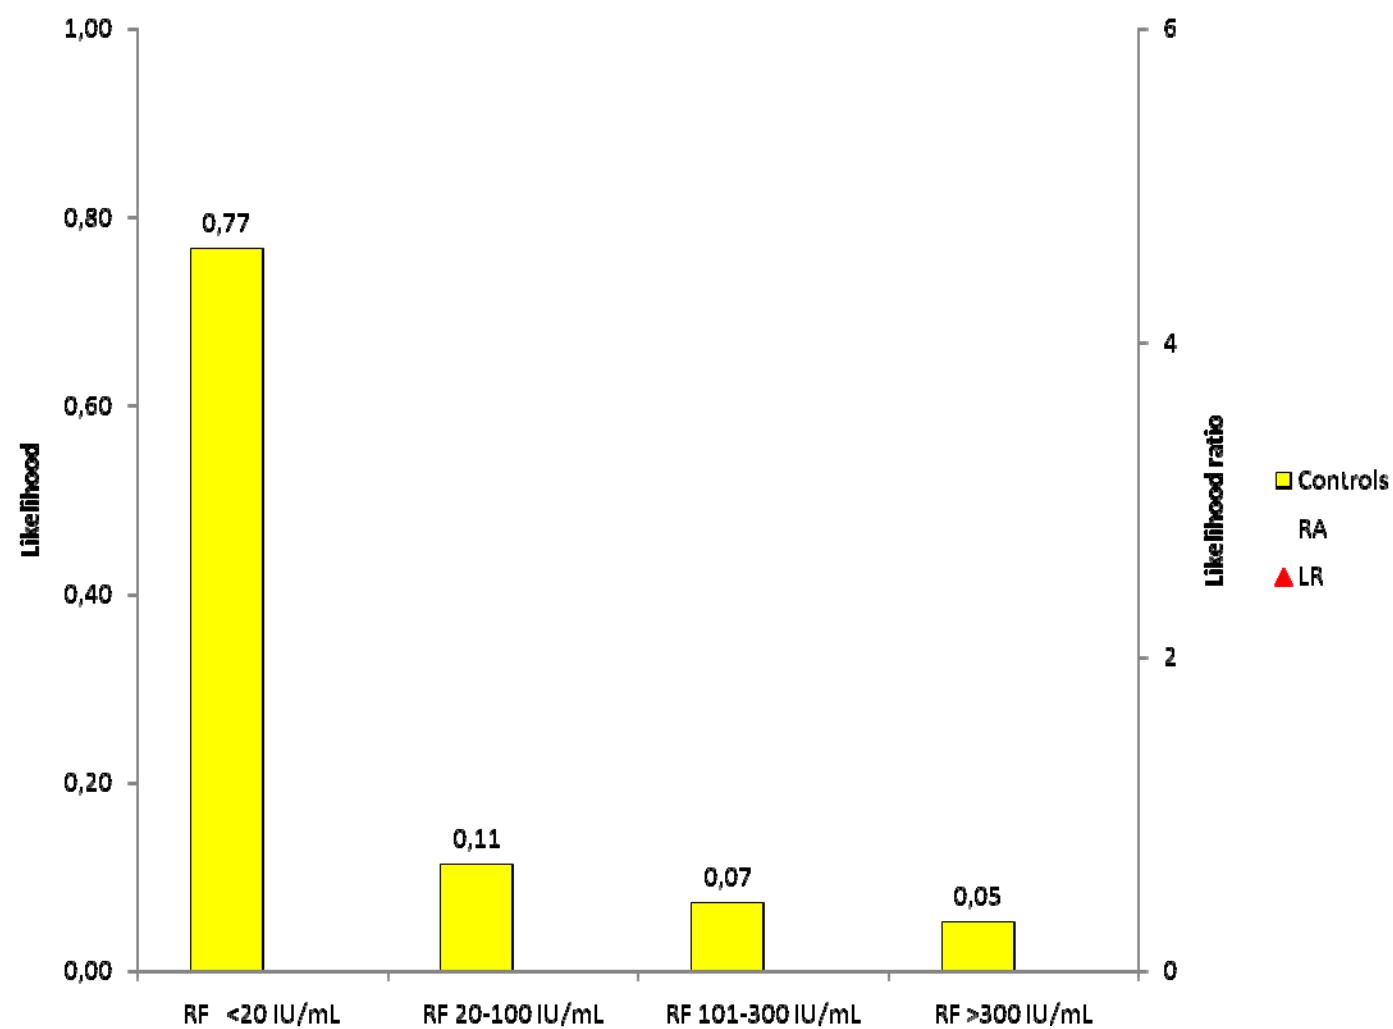

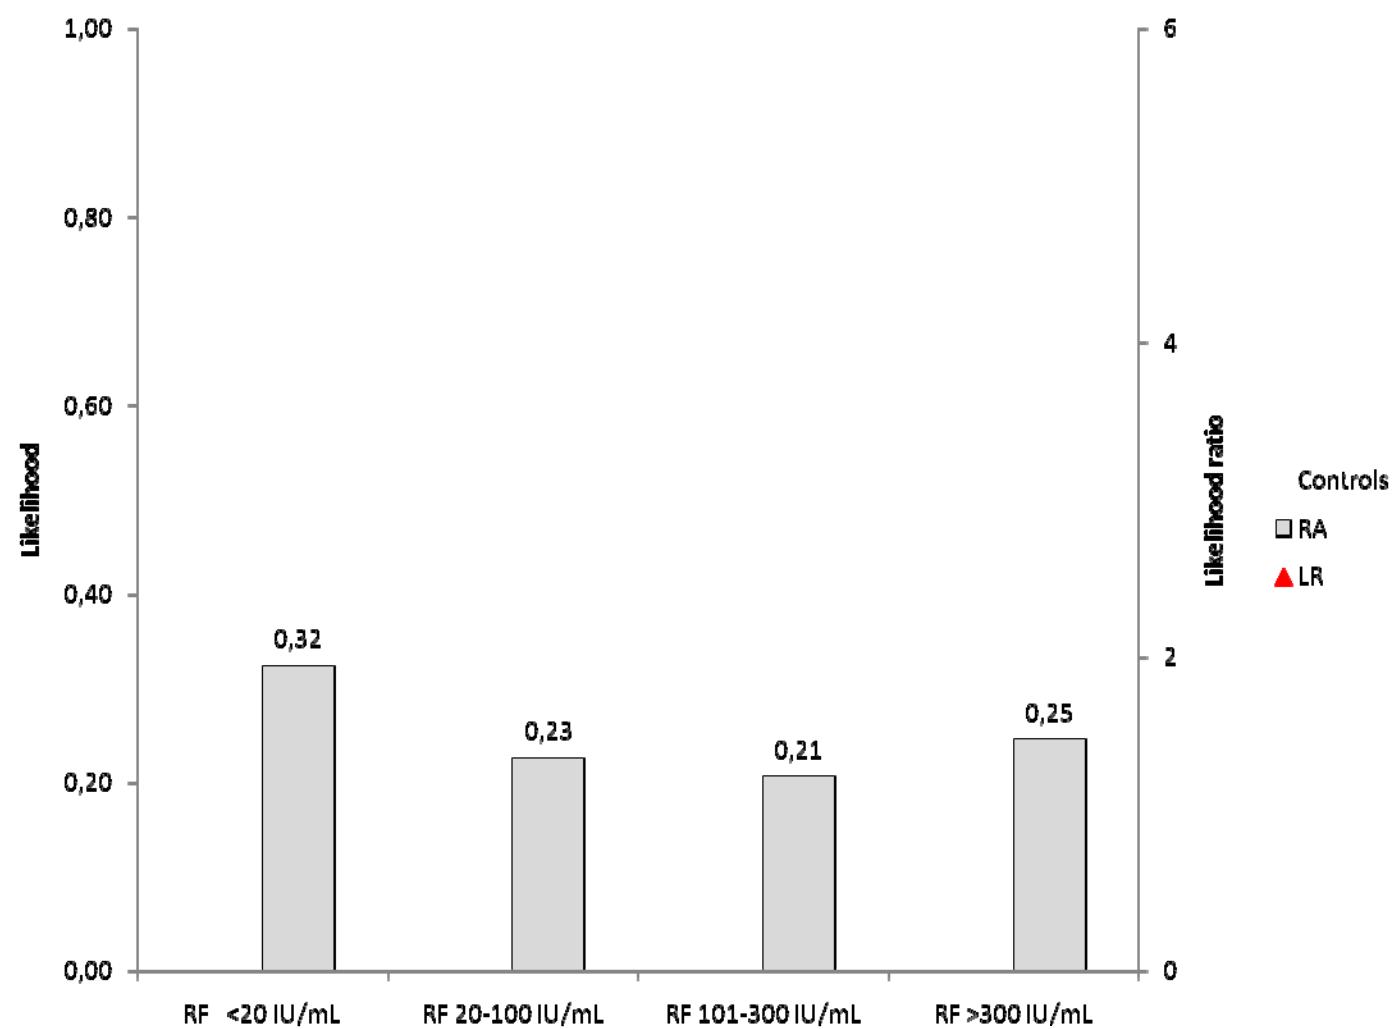

LR

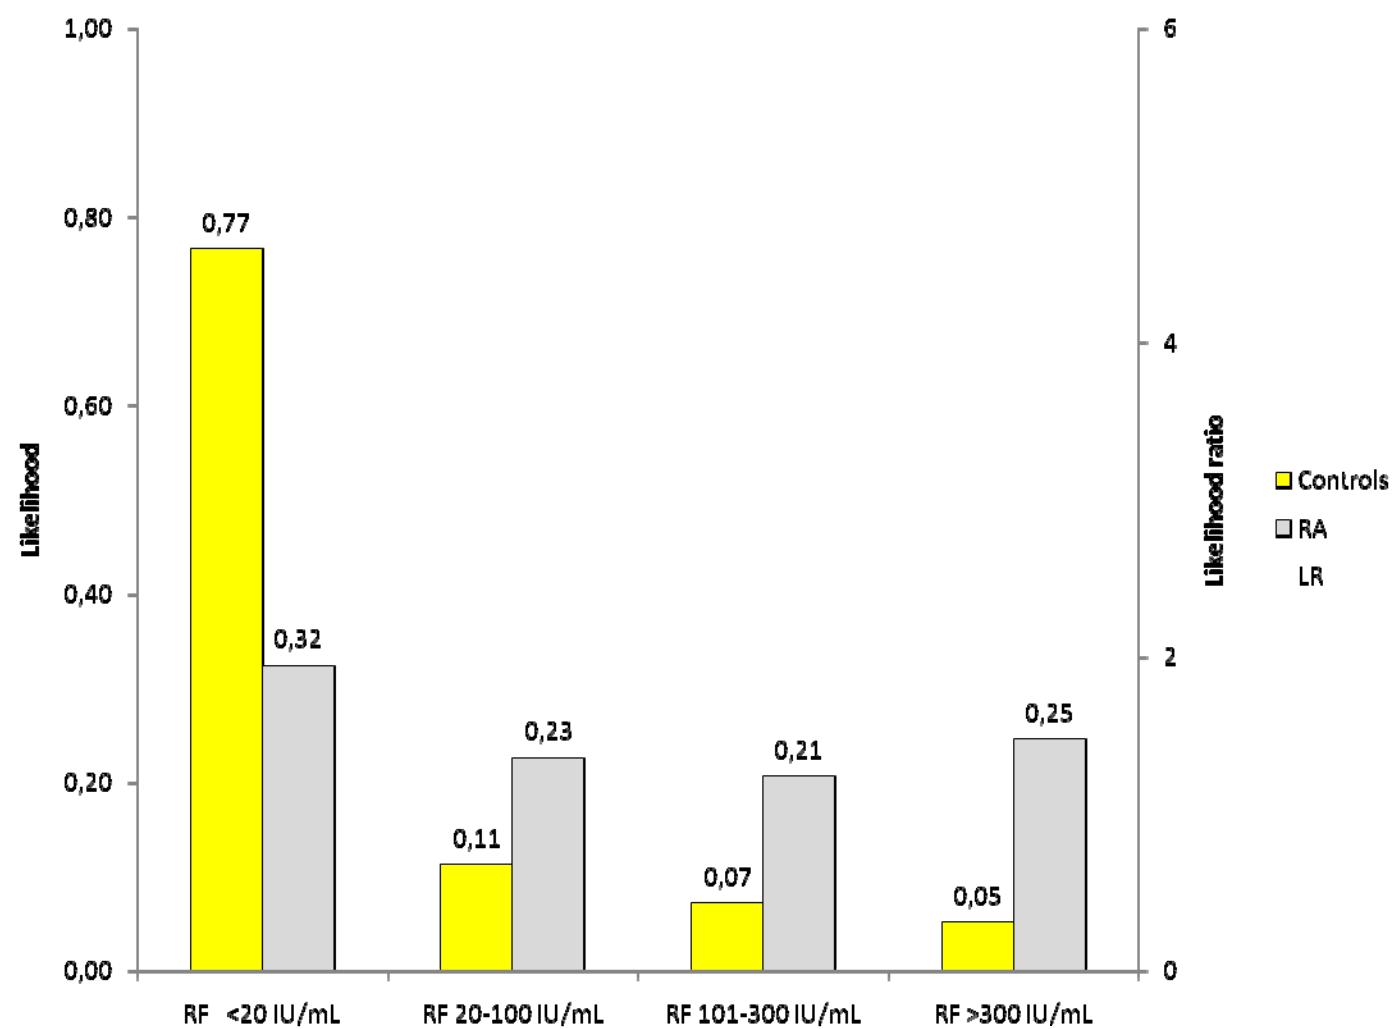

1		no clinical value
>10	<0.1	clinically important difference
5 – 10	0.1 – 0.2	modest, but substantial difference
2 – 5	0.2 – 0.5	small difference that may be relevant

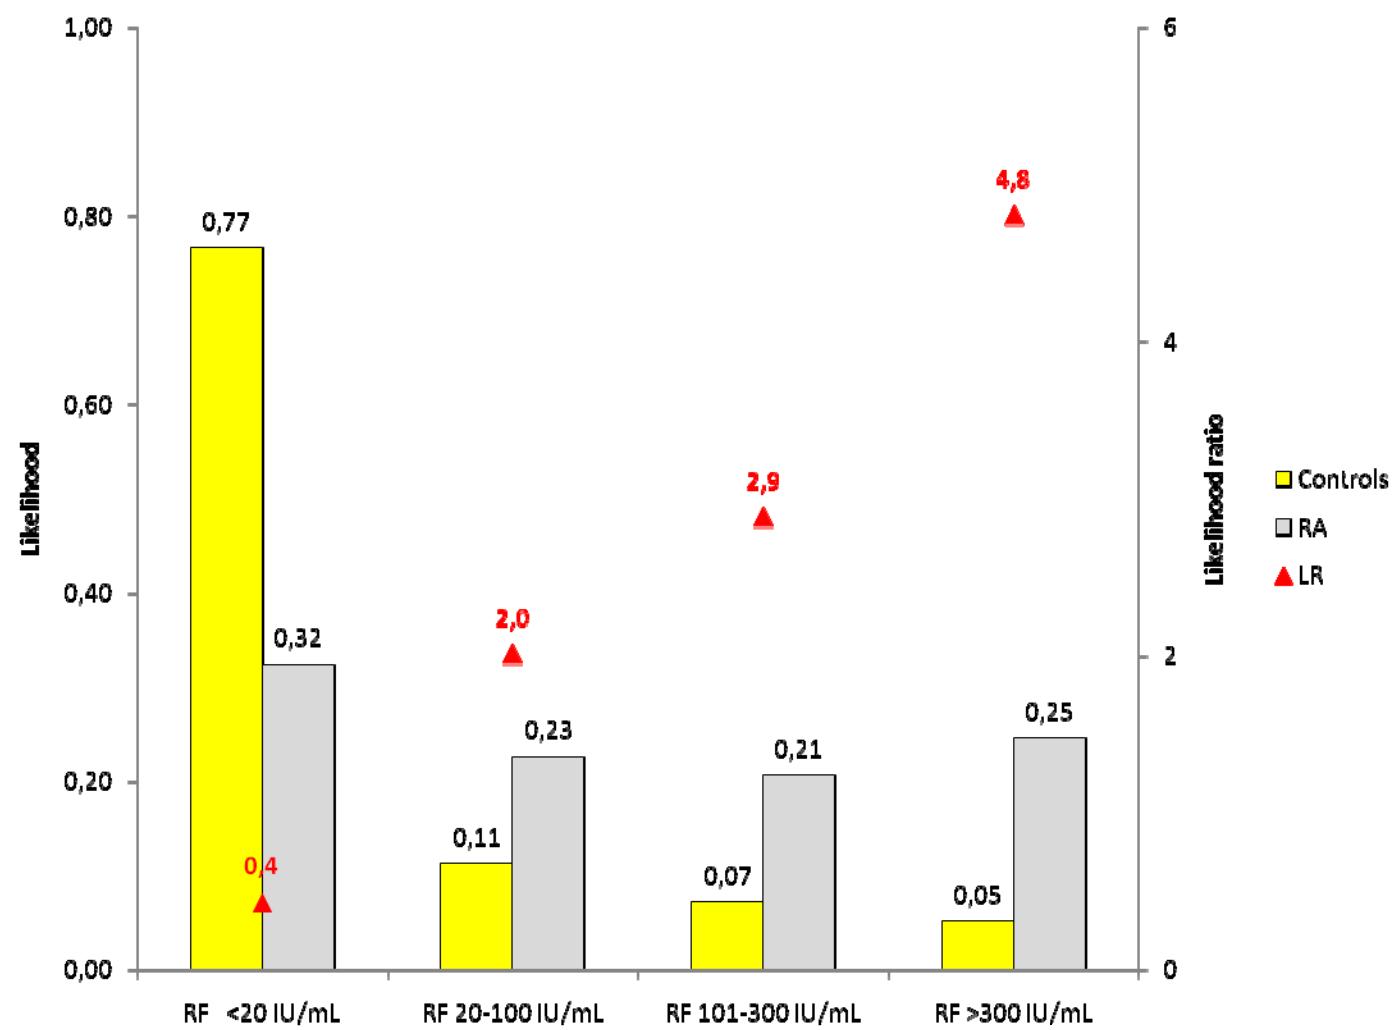

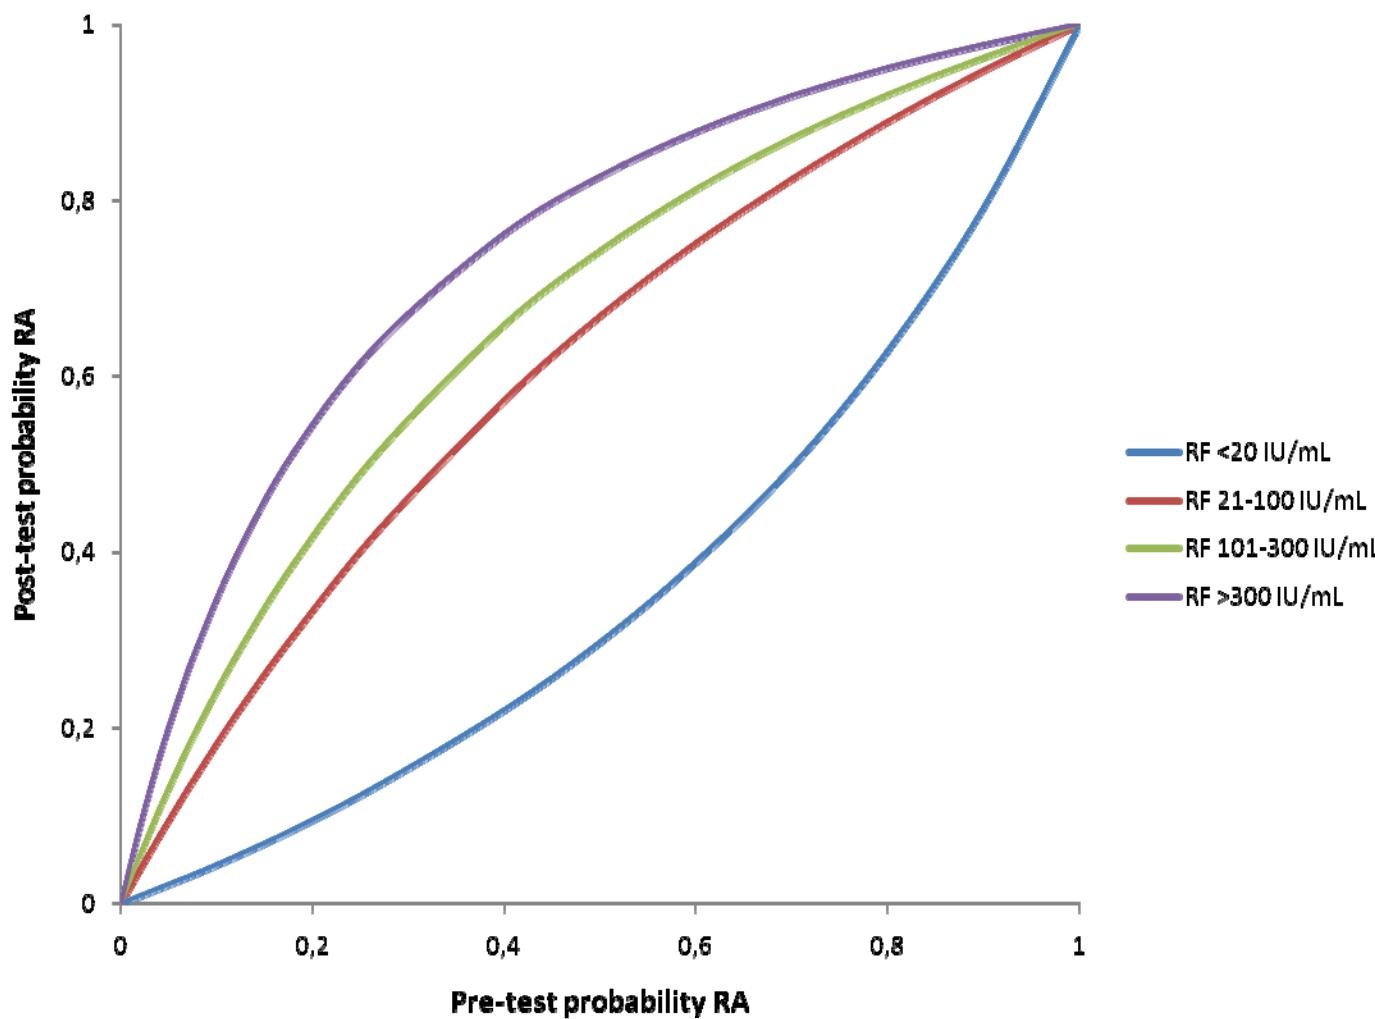

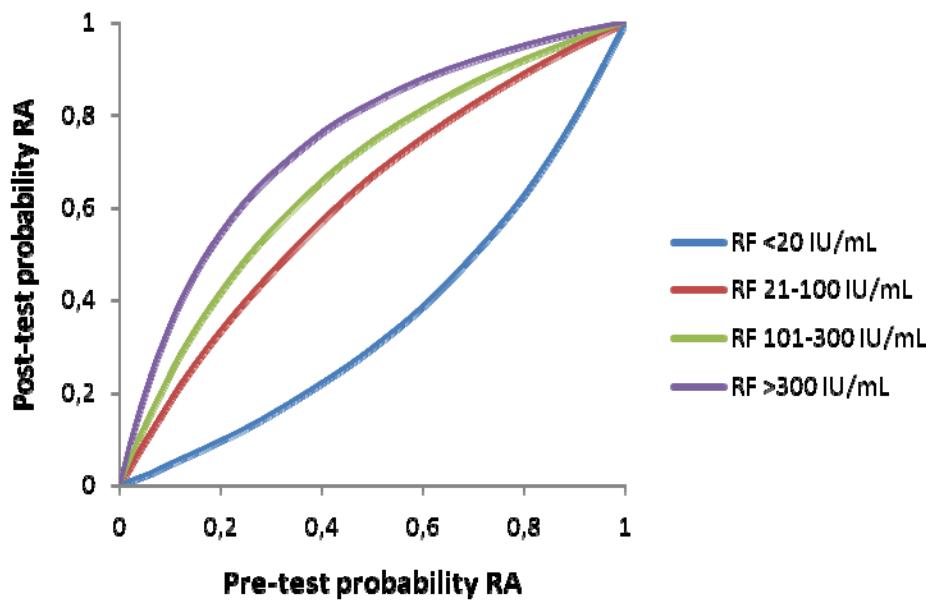

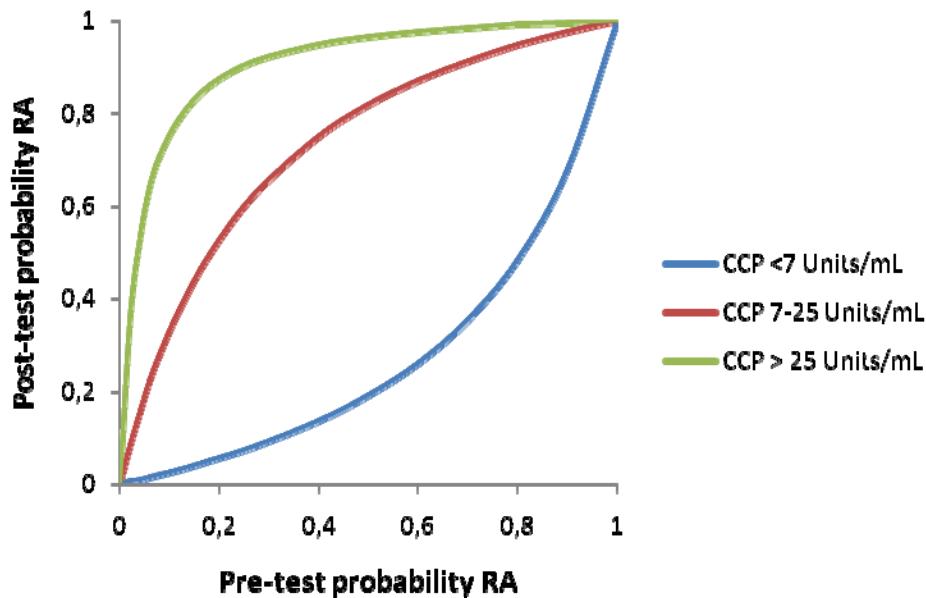

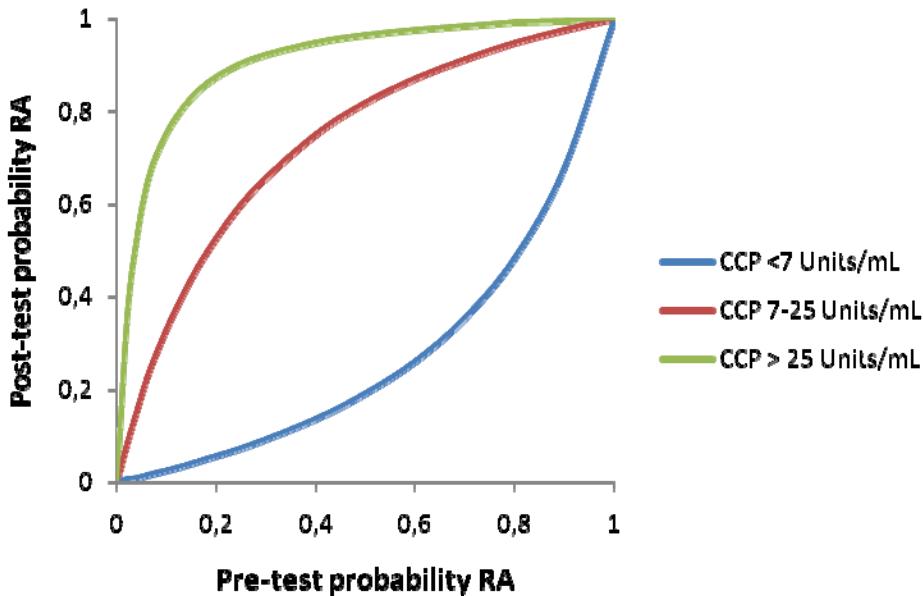

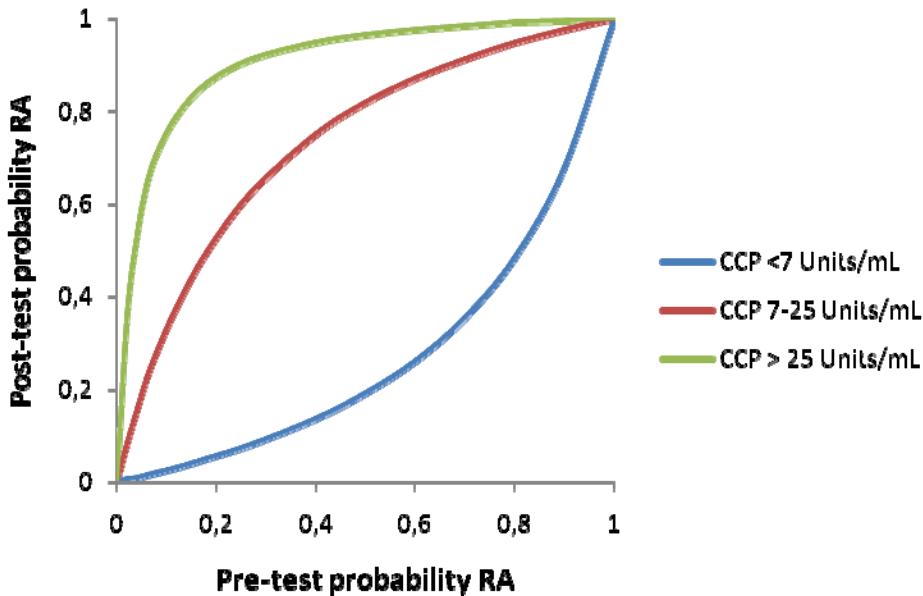

Female, 50 years old
Recent onset undifferentiated arthritis
Intermittent asymmetric tender and swollen small joints of the hands (n=5)
CRP: 10 mg/L

Female, 50 years old

Symmetric arthritis of upper and lower extremities

Tender and swollen small joints (n=12)

CRP: 70 mg/L

Diagnostic performance of anti-DGP assays

IgG anti-DGP

- 229 CD patients
- 900 diseased controls

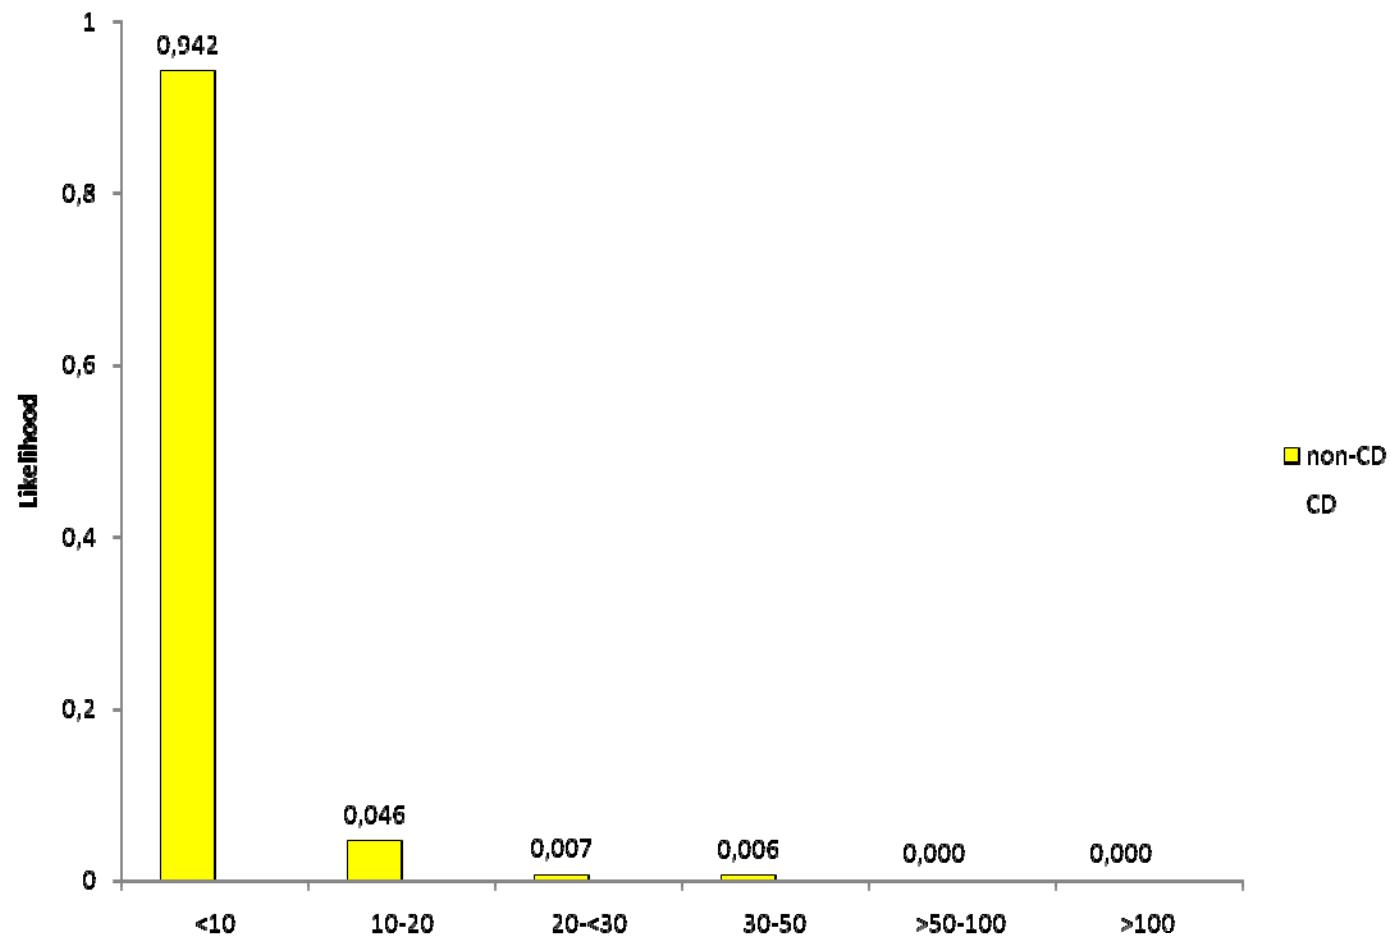

IgA anti-DGP

- 229 CD patients
- 505 diseased controls

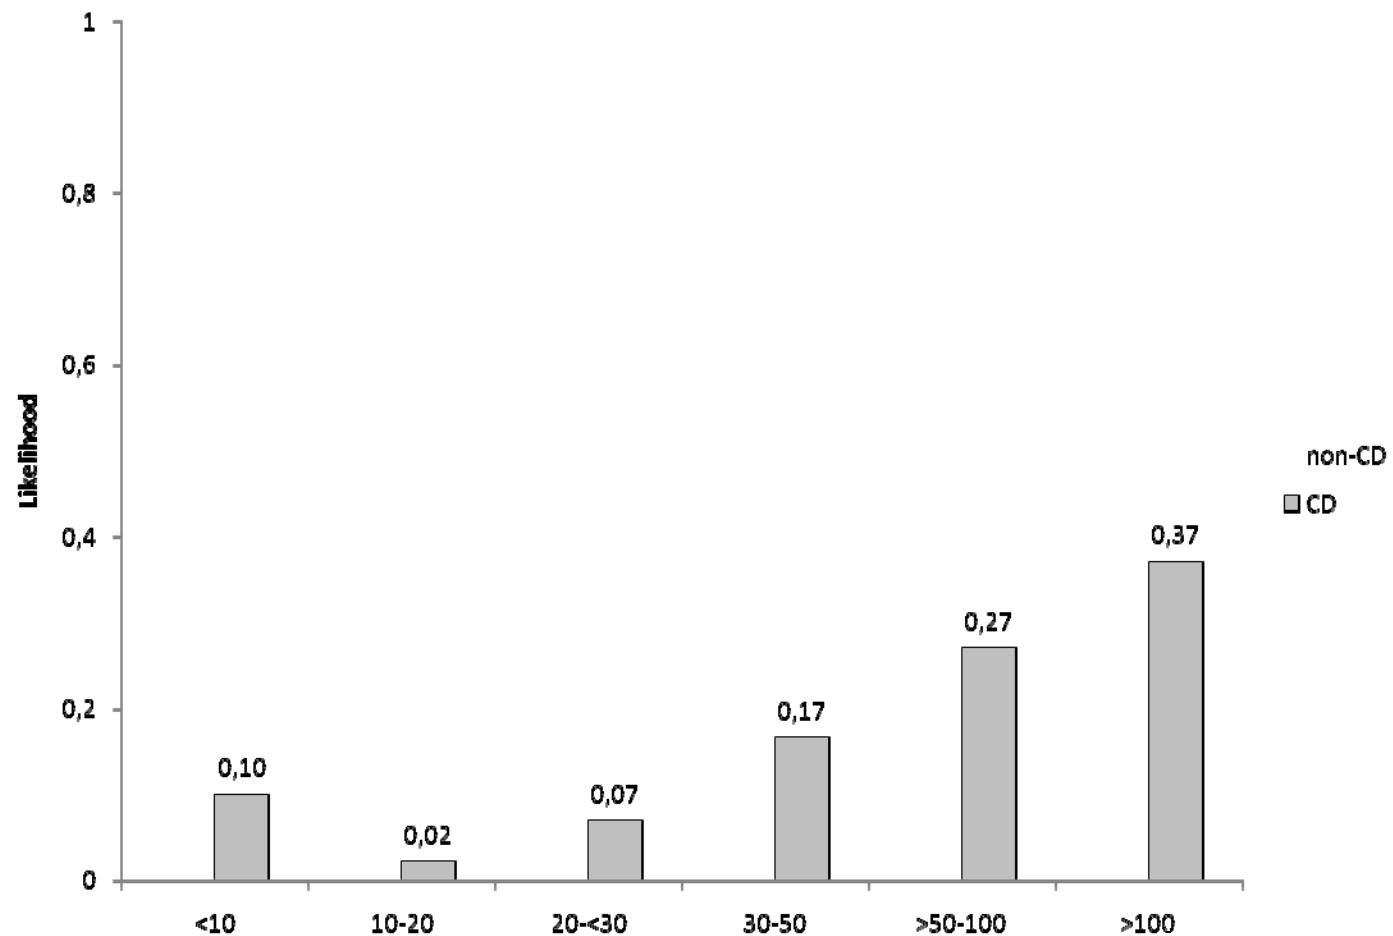

All patients and controls underwent biopsy

	sensitivity	specificity	LR
IgG anti-DGP			
Inova	87.8%	98.8%	73.2
Euroimmun	82.5%	98.9%	75
IgA anti-DGP			
Inova	84.7%	94.3%	14.8
Euroimmun	81.7%	95.4%	17.7
Screen Inova	95,6%	93.0%	13.6

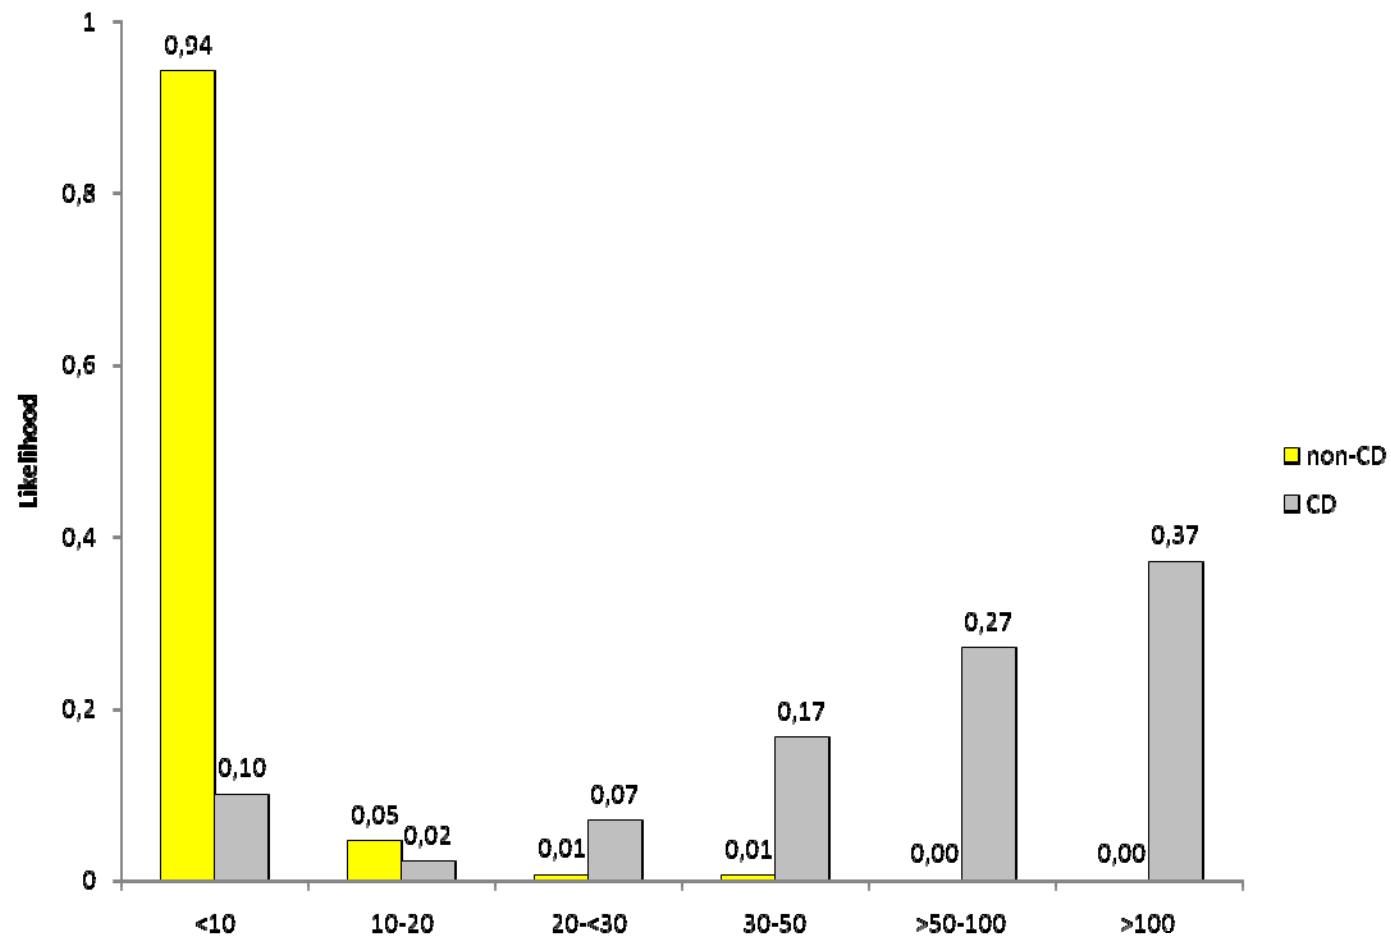

IgG DGP Inova

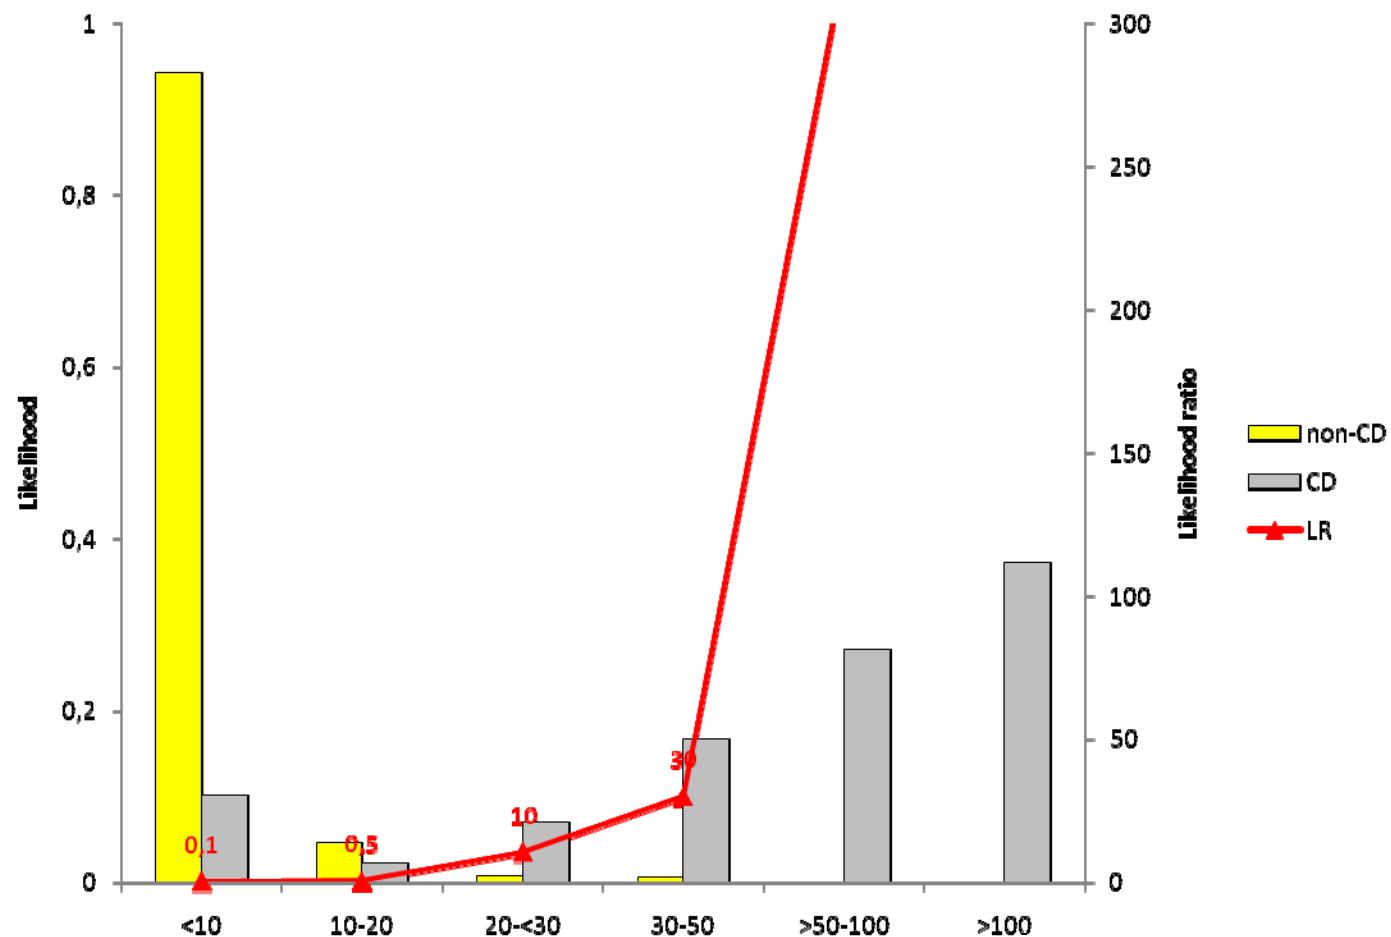

IgG DGP Inova

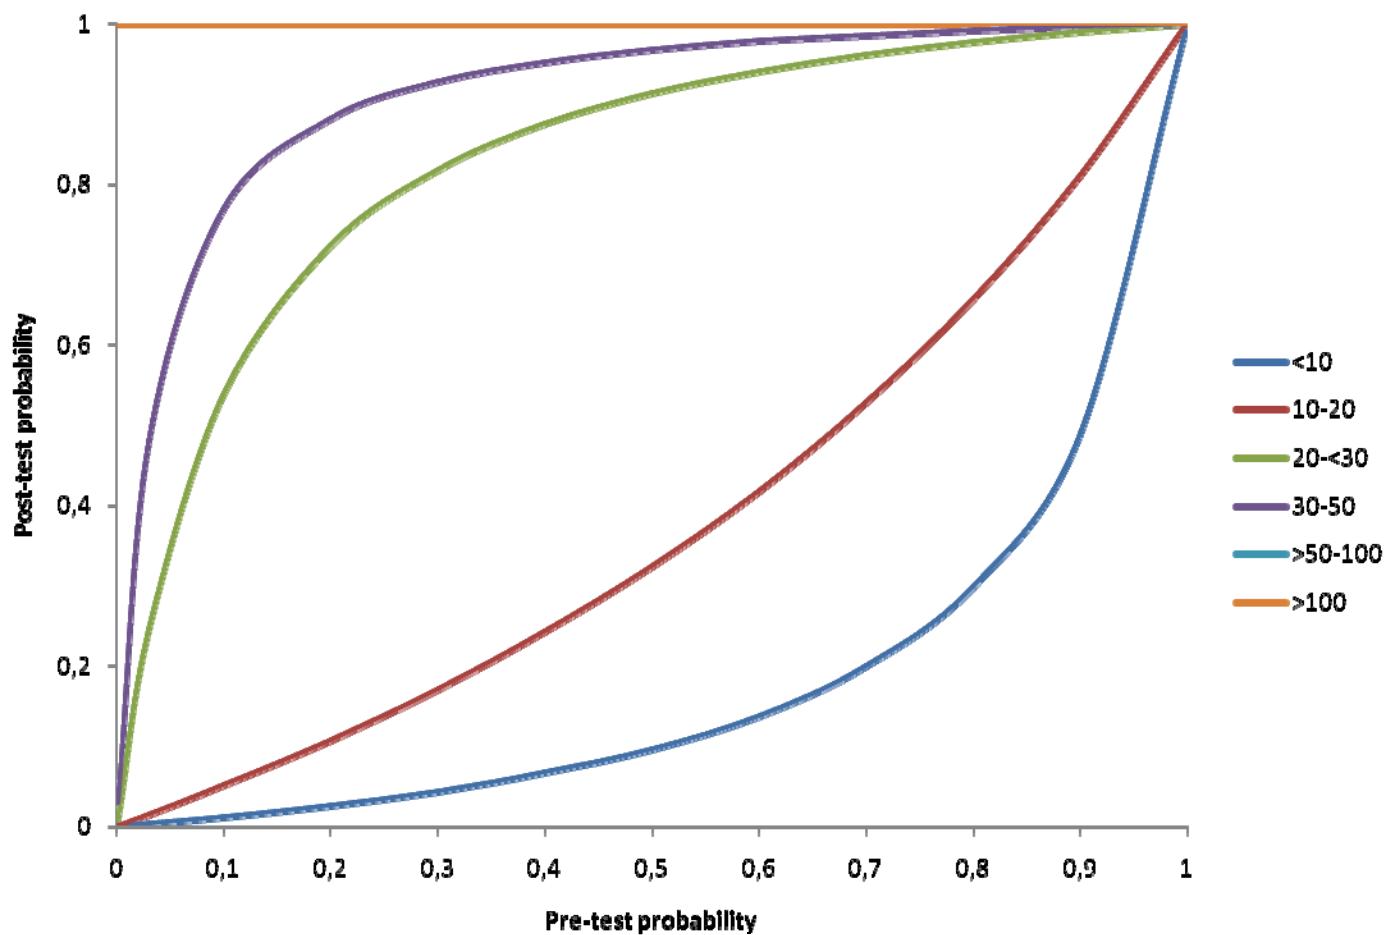

IgG DGP Inova

IgG DGP Euroimmun

IgG DGP Euroimmun

Conclusions

- We showed that a graphical representation is the best way to convey information on post-test probabilities.
- We illustrated how likelihood ratios depend on antibody level.
- Such knowledge may help with the interpretation of a specific test result.
- Clinical laboratories might consider to provide likelihoods ratios or probability data for autoantibody test result intervals.
